

## Cushion Tire Forklift Parts

Parts for Cushion Tire Forklift - Cushion tires are a solid tire with a smooth profile. Its' tread is attached to a steel ring to be able to form the tire, and the tire is pressed onto a hub that is mounted to the lift truck. These kinds of tires are ideal to utilize in smooth floor warehouses and are accessible in several rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is an extremely solid tire. These types of tires are used rather than cushion tires when there is a higher load capacity than can be acquired using a cushion tire and such applications that need a lower steering effort. Poly tires available in a variety of hardness ratings to meet other specific application requirements. Narrow Aisle models and Orderpicker lift trucks would normally make use of small diameter poly tires for their outrigger load wheels.
