

Forklift Grapple

Grapples for Forklifts - Grapples work together with the crowning operation of the bucket cylinder located on the excavator. They can mount directly onto the jib or any quick hitch which is in bucket position. Grapples are normally used for the processing and handling of construction materials, timber, domestic and aggregate waste items. The grapple's boxed design has added support bridging. This particular manufactured design offers the grapple with utmost strength and support by way of stopping the body from breaking and rotating through its function.

The grapple together with all of its moving parts are made out of hardened steel. The pivot points are designed to be able to ensure supreme closing force and holding ability. The operator has the capacity to deal with different sizes and varieties of materials using the jaws fitted at the end part of the grapple with toes. This can enable the jaws to close through one another in a finger configuration for utmost handling capacity.
